Enabling inclusive education through technology

news

March 2018

We proudly present to you the first newsletter of the EN-ABILITIES project (en-abilities.eu). This bulletin is an excellent opportunity to keep up-to-date about the last months' progress, news, events and new materials and resources created. The first newsletter is addressed to present you the project and its partners

The project

EN-ABILITIES proposes a comprehensive tool to facilitate the language learning of people with special needs. During the project lifecycle, partners will develop tools aimed at encouraging autonomous language learning for adult students with Special Educational Needs in formal and no-formal education settings, implementing a Virtual Learning Environment (VLE) and a new validated and evidence-based methodology and approach translated into practical guidelines for ICT and software developers and pedagogical guidelines for teachers.

The proposed method deploys a sequenced meaningful learning process, suitable for being adapted to each student. This technique will be integrated into the VLE together with agile and flexible resources.

Therefore, EN-ABILITIES provides an innovative approach to bring closer the language learning to adult students with Special Educational Needs

The consortium is composed of 5 different universities with the complementary background (ICT, teaching, rehabilitation, etc.), one ICT company and one Association.
